## **Syllabus**

## **ASEN 3036 Introduction to Human Space Flight**

This course introduces students to the challenges and rewards of human space flight. Historical and current space programs and spacecraft will be discussed, along with the motivation, cost and rationale for human space exploration. An overview of the space environment will be presented in the context of what is needed to sustain human life and health, including physiological and psychological concerns, in a space habitat. Current events including space research will also be highlighted. Students will learn about the astronaut selection and training processes. Finally, anomalies, mission operations and future program directions, with some insight into career planning, will be covered. The emphasis on learning will be to understand the way humans approach the exploration of space and how such a bold endeavor affects us individually and as humans. Students will be encouraged to explore through readings and research different perspectives of spaceflight to include political, scientific, historical, economic, cultural, and social as well as to consider the impact on our future.

**Instructor:** Jim Voss, Former Astronaut, Scholar in Residence,

Email: jim.voss@colorado.edu

Office: Aerospace Building 317

**Prerequisites:** None, open to all majors at any level

**Space Minor:** This class is one of the elective courses for the CU Space Minor that is open to any undergraduate student from any major.

For more information on the CU Space Minor see: <a href="http://www.colorado.edu/spaceminor/learn-more">http://www.colorado.edu/spaceminor/learn-more</a>

**Textbook** Spacefaring - The Human Dimension Los Angeles, CA, 2001

**Grading Breakdown**: Homework (20%), Quizzes (30%), Project (15%), Exam 1 (15%), Exam 2 (20%)

## **Required Readings:**

- Spacefaring The Human Dimension Angeles, CA, 2001
- Various articles and NASA reports provided on the course home page

**Suggested Readings:** 

Physiological Effects and Countermeasures

Operational Space Medicine

Spaceflight Analogs and Human Factors

Life Support Systems

Administration for the class, background information Philosophical perspective Reasons for going to space NASA and our national space policy History of human spaceflight and U.S. Exploration plans (1 hour) US Space Program goals and plans History of human spaceflight People **Programs** Spacecraft Space environment (1 hour) Hazards Space operational medicine Countermeasures Physiological effects of spaceflight (1 hour) Human response Long term health

Biomedical aspects

Psychological and sociological aspects of human spac9s EMC /P &MCID 18xBDC q0.00000912 0 612 792 reW\*

Life support systems (2-3 hours)

Environmental control and life support systems

Spacecraft systems examples

Human factors for spaceflight (1 hour)

Current and recent spacecraft overview and space flight analogs (3 hours)

Space Shuttle

**International Space Station** 

Russian Soyuz

Commercial spacecra

```
Astronaut Candidate training
      Crew training
Extra Vehicular Activity (2 hours)
       Physiology of space walking
       Space suit design
Robotics (1 hour)
       Human interface
       Autonomous vs. controlled
Surface Elements (1 hour)
       Human habitats
       Surface vehicles
Space mission accidents and anomalies (1 hours)
       Spaceflight case studies
       Apollo 1
       Challenger
       Columbia
       Russian mishaps
       Technical aspects
       Ethical and moral aspects
       Management decision making
Space Mission Operations and Planning (1 hour)
Space research (as required)
       Humans as subjects
```

Current topics

Space current events and projects (as required)

Space tourism (1 hour)

Past and current activities

Future

Future of Spaceflight (1 hour)
